About ISRO

The Indian Space Research Organisation (ISRO) is India's national space agency, known for its cost-effective innovations and groundbreaking missions like Chandrayaan, Mangalyaan, and Aditya-L1. This concept site is built to present ISRO's achievements in a modern, engaging, and educational format.

History & Major Achievements

1969 – ISRO is Founded

The Indian Space Research Organisation was established, marking India's official entry into the space era.

1980 – First Satellite in Orbit

Rohini-1 becomes the first Indian satellite placed in orbit by an Indian launch vehicle (SLV-3).

2008 – Chandrayaan-1

India's first mission to the Moon discovered water molecules on the lunar surface.

2013 – Mangalyaan (Mars Orbiter)

India becomes the first country to reach Mars orbit on its first attempt — at a fraction of global costs.

2023 – Chandrayaan-3

India becomes the first country to land near the Moon's south pole, marking a significant step in lunar exploration.

2024 – Aditya-L1 Launch

India launches its first solar observatory to study the Sun's corona and solar emissions.

Key Missions

Chandrayaan-3

India's third lunar mission landed near the Moon's south pole.

Read More

Aditya-L1

India's first solar observatory launched in 2024.

Read More

Mangalyaan

India's Mars mission successful on first attempt.

ISRO Missions

Ongoing

Chandrayaan-3

India's third lunar mission to the Moon's south pole.

Explore Mission

Scheduled

Gaganyaan

India's first human spaceflight mission.

Explore Mission

Completed

Mangalyaan

India's first interplanetary mission to Mars.

Explore Mission

Completed

RISAT-2BRI

Radar imaging satellite for all-weather surveillance.

Explore Mission

Ongoing

Aditya-L1

India's first solar observatory mission.

Explore Mission

Completed

PSLV-C37

Record-setting mission with 104 satellites.

Explore Mission

Completed

Chandrayaan-1

India's first lunar mission.

Explore Mission

Completed

INSAT-3DR

Advanced meteorological satellite.

Explore Mission

Completed

GSAT-29

High-throughput communication satellite.

Explore Mission

Completed

Cartosat-3

High-resolution earth observation satellite.

Explore Mission

Scheduled

SHUKRAYAAN-1

INDIA'S FIRST VENUS MISSION

Shukrayaan-1

India's upcoming Venus exploration mission.

Explore Mission

Completed

Astrosat

India's first multi-wavelength space telescope.

Explore Mission

Gaganyaan

[Scheduled]

GAGANYAAN MISSION

INDIA'S FIRST MANNED FLIGHT TO SPACE

The project was first approved by PM Narendra Modi on August 15, 2018.

It will send the three member crew to space for at least seven days by 2024-25.

ISRO hopes to deploy its biggest rocket, GSLV MK III, for this project.

The space agency hopes to launch the first mission within 40 months from the date of approval.

It would be one of the cheapest manned spaceflights in the world, with the estimated cost of not more than Rs 10000 crore.

India plans to call its astronauts "Vyomnauts" since 'Vyom' in Sanskrit means 'Space'.

India will become fourth country after Russia, US and China to send humans to space.

Gaganyaan will carry a crew of 2-3 astronauts to Low Earth Orbit for up to 7 days. It is expected to launch soon, marking a historic milestone for ISRO.

About ISRO

The **Indian Space Research Organisation (ISRO)** is India's national space agency. Founded in 1969, ISRO has grown into one of the world's most respected space institutions. Known for cost-effective innovation, ISRO has led missions like Chandrayaan (Moon), Mangalyaan (Mars), and commercial satellite launches for many countries.

Fun Facts About ISRO 🚀

- 📄 Mangalyaan was cheaper than *Interstellar*.
- 🌐 Launched **104 satellites** in one go (a world record!)
- 🌕 First Moon mission was *Chandrayaan-1* in 2008.
- 💡 One of the most cost-efficient space agencies in the world.
- ✈️ Owns a large fleet of remote sensing and communication satellites.

Why Redesign??

The current ISRO website serves a functional purpose, but there's room to enhance the visual experience, interactivity, and accessibility — especially for students and space enthusiasts. This redesign focuses on modern UI/UX, mobile responsiveness, and storytelling that inspires curiosity and pride.

🔗 This project is part of the **Future Interns Fellowship Program**, aimed at encouraging real-world learning through impactful redesigns.

At ISRO, innovation is limitless.
Every role contributes to India's space journey.
We believe in empowering the curious.
We dream big, and work hard.
Join the movement. Join the mission.

Explore. Dream. Discover.

Jobs at ISRO

Aerospace Engineer

Designs and tests aircraft, satellites, and launch vehicles. Ensures structures can handle extreme space conditions.

Satellite Communication Engineer

Manages development and operation of satellite systems ensuring smooth communication and data transmission.

Mission Director

Oversees planning and execution of space missions. Coordinates teams and ensures success of critical launches.

Propulsion Engineer

Works on the rocket engines that power launch vehicles. Develops efficient and reliable propulsion systems.

Ground Systems Operator

Monitors and controls satellite operations from Earth. Handles data acquisition and ground station interfaces.

Astrophysicist

Researches celestial phenomena. Helps design instruments and interpret cosmic data for scientific missions.
